Fix the leaky pipeline!

A career-building program for women in science

Fix the leaky pipeline program

This career-building program, supported by the ETH-Domain, offers female PhD students, postdocs and young scientists the opportunity to reflect on their professional situations, develop a strategy for embarking or continuing on their career paths, receive further training, and extend their personal and scientific networks. The core elements of the project are: customized further education, work in peer groups, inter-institutional cooperation, and an interdisciplinary network. The aim is to support women in their scientific careers and in the process to fix the “leaky pipeline” of women in science.

Program Concept

Courses, coaching groups and networking events for women scientists with PhD degree, PhD students and young scientists, working in the ETH-Domain. All the guests of this closing event in Berne have participated in one or several offers of the program since its beginning in 2007.
